

powerMIX™

STORAGE TANK MIXING SYSTEM

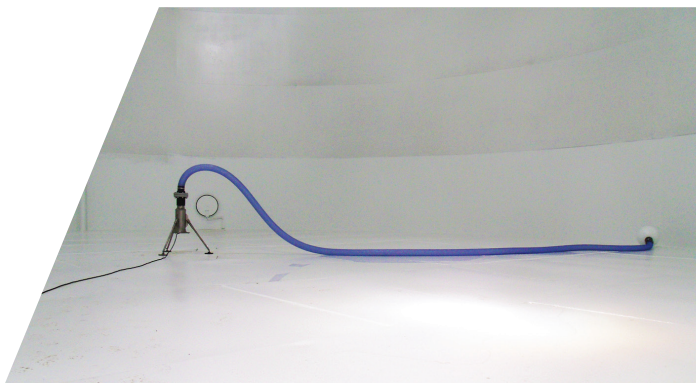

simple | effective

Active Mixing System for Tanks and Towers

Proper mixing of storage tanks is paramount to maintaining water quality. The powerMIX System excels in mixing all tank geometries, including GSRs, elevated tanks and standpipes.

The powerMIX uses axial flow technology, generating a powerful jet of water to mix the tank. Systems for standpipes include an extended hose and float to transport the jet directly to the top of the water column.

Reduces and eliminates Thermal Stratification and Icing Problems

Models available to fit GSRs, Elevated Tanks, and Standpipes

Low power consumption

Control panel housed in outdoor rated enclosure
